

CHUCC Naturescaping Committee

Purpose & Goals

"The Earth is the Lord's, and all that is in it, the world, and those who live in it"
(Psalm 24:1)

God calls us to be responsible stewards of the great gift of Creation, working together to help protect and restore the health of our planet, Earth.

The CHUCC Naturescaping initiative embodies local action for that purpose, with the following goals for the CHUCC grounds and the collective communities of all species they benefit:

- Combat native species decline due to the impacts of global warming caused by human activity.
- Increase and provide habitat for wildlife including pollinators through appropriate native plantings of trees, shrubs and plants.
- Reduce maintenance effort by CHUCC members and increase community involvement by removing invasive or undesirable plant species and by installing native plantings on the CHUCC grounds.
- Expand CHUCC members' and the community's appreciation of habitats and understanding of environmentally friendly and sustainable practices through education including interaction with the grounds.
